COMMENTS:

- During the inspection of the facility, I met with Frank Rosie. Mr. Sam Diana, the responsible official and owner of the dry-to-dry operations, was not in at the time of inspection.
- I observed the Aero Tech dry-to-dry machine; it was not in operation at this time. The machine is not used more than on the average an hour each day. It is typically run 1 – 2 cycles.
- I observed the 2006 – 2007 calendar records for the perchloroethylene totals and leak detection observations. The highest perc total in the previous 12 month period was 40 gallons. The purchase records and waste manifest were with the calendars. The temperatures recorded ranged between of 38 °F – 40°F. The monitoring and recording of the leak checks were up to date and being made on weekly bases as required.
- I observed the dryer and associated equipment. The machine is very clean like new as is not used often. (See photos)
- The perchloroethylene hazardous waste containers were closed and located in secondary containment.
- There were no perchloroethylene odors detected during the inspection of the facility.
- I informed Frank Rosie of the new rule change and requirement to obtain a halogen detector for leak checks. I gave him a copy of the rule guidance, a P2 pamphlets for dry cleaning operations, and the guidance for the separator water. .
- The permit was renewed and will not expire until 1/4/2012.
- I told Frank that Rosie Diana needed to sign the annual certification form and mail it into our office.
- The 1997 Hurst boiler is located outside to the back and west side of the building.
- Ms. Diana stated she had signed and mailed in the annual certification form. The annual certification on 6/25/2007. (See File)
- This facility appears to be in compliance at this time.
