COMMENTS: •I performed an inspection of this facility with Mr. Arunkumar Patel, responsible official and owner.

- I observed the dryer and equipment. There were no perchloroethylene odors from the unit, during operation. The equipment appeared well maintained at this time. The covers on evaporator and water separator were sealed. Mr. Patel stated he takes the separator water and pours into the evaporator when needed.
- I observed the boiler located to the north side of the facility building. The hazardous waste containers were stored in secondary containment base to prevent leaks onto ground.
- I observed the calendar record and the purchase invoices, and hazardous waste manifest copies with Mr. Patel. The temperature recordings for the dryer were ranging from 30° F – 45° F. These are acceptable levels for the cool down process.
- The facility 12 month Perchloroethylene total for the month of March 2006 was 150 gallons. The totals for 2006 were 120 - 140 gallons, the previous year 2005 monthly totals ranged from 110 – 140 gallons. The reading for June 2006 was 125 gallons; July was 120 gallons at this time has not purchased additional Perchloroethylene. The facility typically gets 15 gallons per the purchases invoices. They had a one time event over 140 gallons, due to a decision to buy additional Perchloroethylene when less expensive. The RO, Mr. Patel, stated he would not be going over 140 gallons again. I verbally warned him that continued exceedance of the 140-gallon limit for new small classification, would require a change to new large classification.
- I informed Mr. Patel he should have contacted the office when this occurred. I advised him that I would contact him if enforcement negated or if additional requirements regarding the Perc usage.
