**COMMENTS:** Mr. Thompson and I did a walk-around inspection of the facility. The following were noted:

- Water sprayers are available to mitigate emissions from material piles.
- The yard is dirt and gravel. It was wet at the time of the inspection from rain. There is a water hose available for wetting the yard to reduce fugitive emissions from yard work. Wetting the yard is listed on the "Good Housekeeping Checklist".
- A cement mixer truck was observed loading. The spray bar was operating and successfully mitigated the emissions from the loading. Some puffs of emissions were noted coming from the weigh hopper vent as it was loaded.
- The silos were not being loaded at the time of the inspection. Both were tested on 10/28/2005 with results of 0% opacity. The facility follows a routine baghouse maintenance plan, which was recommended in the previous inspection report.

**RECOMMENDATIONS:**

- Recommend routing the emissions from the weigh hopper to the silo to provide for better control of these emissions.
- Submit a new notice of intent to operate under the air general permit for concrete batching plants by 11/05/2006 along with a current
