4. Are emissions from the weigh hopper (batcher) operation controlled by the silo dust collector? (If answer to this question is “Yes”, then continue on to questions 4.a) and 4.b) below. If answer is “No” then skip 4.a) and 4.b) and continue on to question 5.)----- Yes No
 - a) Was the batching operation in operation during the visible emissions test?----- Yes No
 - b) During the visible emissions test, was the batching rate representative of the normal batching rate and duration?----- Yes No
5. If emissions from the weigh hopper (batcher) operation are controlled by a dust collector, which is separate from the silo dust collector, are the visible emissions tests of the weigh hopper (batcher) dust collector conducted while batching at a rate that is representative of the normal batching rate and duration?----- Yes No

2. If this is a stationary concrete batching plant, is there one or more relocatable nonmetallic mineral processing plants using individual air general permits at the same location? (*If your answer to this question is YES, then proceed to questions 2.a), thru 2.d), below.*)----- Yes No
- a) Are there any additional nonexempt units located at this facility?----- Yes No

COMMENTS:

Contacts present:

Lisa Swain, VE compliance test consultant
Ronnie Raffield, Plant Manager, 850 670-5740
Wiley Willoughby, Troy Simpson

Ms. Swain had finished the test and was leaving. I reviewed her VE results and the readings appeared to be compliant. According to facility staff, a new spraybar was installed about a month ago.

The compliance testing had ended and the trucks had finished loading upon my arrival. There were no excess emissions observed. The yard appeared to have a sprinkler system for yard dust.

The inspector called Allen Faulk on May 21, 2007 and he requested all correspondence be mailed to Mr. Willoughby.
