**COMMENTS:** I was met at the facility by Ms. Kruis Retherford and Mr. Al Kirkland who accompanied me on a physical inspection of the plant. I was provided information on the use of resin and gelcoat used during the of September 2006 through October 2007. I subsequently received a fax that provided November and December 2007 resin and gelcoat data. This information indicated that the facility used a total of 82,690 pounds of material in the proceeding 12 month period. This exceeds the facility's maximum permitted limit of 76,000 pounds in any consecutive 12-month period.

I spoke with Ms. Retherford about the need for the facility to apply for a title V Air Operating Permit. Ms. Retherford indicated that she was aware of the facility's need to get the appropriate permit. Ms. Retherford indicated that she was either going to apply for the required permit or she was going to relocate a portion of the existing facility's operation to a new location, such that neither location would utilize more product then was permitted by a general air permit. Ms. Retherford indicated that a decision on which way she would proceed would be made very soon

It should be noted that the Department's District Office is preparing a Consent Order to address violations for:

- exceeding permitted limits
- not obtaining the appropriate permit when limits were to be exceeded
- and for operating with an expired permit.

The Consent Order will list corrective actions to be performed to bring the facility into compliance. According to the District Office, the Consent Order should be issued within the next month. .
