5. If emissions from the weigh hopper (batcher) operation are controlled by a dust collector, which is separate from the silo dust collector, are the visible emissions tests of the weigh hopper (batcher) dust collector conducted while batching at a rate that is representative of the normal batching rate and duration?----- Yes No

COMMENTS: When I got to this facility the gate was halfway closed but I went in anyway because I heard the spray bars come on. I met with Keith Darkes and told him who I was and what I was here for. He said he was about to leave for the day but what ever I need to see just let him know. I asked him about maintenance of the facility and if there were any changes made within the last 3 years. He said the baghouses are maintained regularly and the there has been no changes to the facility. I asked about the batch plant being mobile and he told me he doesn't know because he has never seen it moved since he has been here. I took a look around the facility and it was very clean and there were spray bars on all the pile heaps. I thanked him for his time and came back to the office.
