4. Are emissions from the weigh hopper (batcher) operation controlled by the silo dust collector? (If answer to this question is “Yes”, then continue on to questions 4.a) and 4.b) below. If answer is “No” then skip 4.a) and 4.b) and continue on to question 5.)----- Yes No
 - a) Was the batching operation in operation during the visible emissions test?----- Yes No
 - b) During the visible emissions test, was the batching rate representative of the normal batching rate and duration?----- Yes No
5. If emissions from the weigh hopper (batcher) operation are controlled by a dust collector, which is separate from the silo dust collector, are the visible emissions tests of the weigh hopper (batcher) dust collector conducted while batching at a rate that is representative of the normal batching rate and duration?----- Yes No

COMMENTS: Facility appeared in good working order during inspection. Batching occurred during inspection. Facility appears to continue to have issues with the spray bar assembly on the weight hopper outlet. The facility was informed that the issue was of concern to the Department. Maintenance was called at that time. If subsequent inspections indicate that the problem is not resolved itself or if the facility continues to ignore the malfunctions, it is recommended that they be placed in a state of non-compliance until the spray bar assembly is properly repaired or replaced. The facility has a tentative plan to add a dust collector to serve the weight hopper assembly.
