- During visible emissions tests of the silo dust collector exhaust points was the loading of the silo conducted at a rate that is representative of the normal silo loading rate, or at least at the minimum 25 tons per hour rate, unless such rate is unachievable in practice?----- Yes No
- Are emissions from the weigh hopper (batcher) operation controlled by the silo dust collector? (If answer to this question is “Yes”, then continue on to questions 4.a) and 4.b) below. If answer is “No” then skip 4.a) and 4.b) and continue on to question 5.)----- Yes No
 - Was the batching operation in operation during the visible emissions test?----- Yes No
 - During the visible emissions test, was the batching rate representative of the normal batching rate and duration?----- Yes No
- If emissions from the weigh hopper (batcher) operation are controlled by a dust collector, which is separate from the silo dust collector, are the visible emissions tests of the weigh hopper (batcher) dust collector conducted while batching at a rate that is representative of the normal batching rate and duration?----- Yes No

COMMENTS: Pre-inspection: According to ARM's and facility files, this facility seems to be in compliance with its current entitlement. The last VE testing was conducted on 5/1/08. This facility has one EU, a cement silo. Inspection findings: No one was at this facility upon my arrival. The silo is in tact and it appears there may have been recent activity. I knocked on the office door, in front and in back but there was no answer. I did not conduct a full inspection because no facility representative was on site, but I did take pictures of silo. I contacted the Authorized Representative, Mr. Michael Mahoney, he stated this facility is operating only sporadically. Facility testing is up to date. I will plan a revisit at this facility for next VE testing in 2009.
