**COMMENTS:** Complaint inspection was conducted with regular annual inspection. Compliant states objectionable odors from the facility is travelling to adjacent business behind the facility (Pump & Irrigation Supply). Ms. Rule admits that odors from the facility have been noted going over to the adjacent business. She has not operated the fans in the layup/paint spraying booths because she says that this makes the odors worse. There are external upward scoops attached to the fans in the booths to divert the flow of air upward, but they are not sufficient to adequately disperse the fumes. She has been in contact with Hill York, a local HVAC company to design a stack or vent system to disperse the odors better. She will contact the Department to reinspect the facility when the system has been installed. Facility has installed a vacuum assisted RTM (Resin Transfer Molding) system with a low pressure resin injection system, an upgrade to the previous system but has not changed their basic process.
