4. Are emissions from the weigh hopper (batcher) operation controlled by the silo dust collector? (If answer to this question is "Yes", then continue on to questions 4.a) and 4.b) below. If answer is "No" then skip 4.a) and 4.b) and continue on to question 5.)----- Yes No
 - a) Was the batching operation in operation during the visible emissions test?----- Yes No
 - b) During the visible emissions test, was the batching rate representative of the normal batching rate and duration?----- Yes No
5. If emissions from the weigh hopper (batcher) operation are controlled by a dust collector, which is separate from the silo dust collector, are the visible emissions tests of the weigh hopper (batcher) dust collector conducted while batching at a rate that is representative of the normal batching rate and duration?----- Yes No

COMMENTS: Note: No questions are answered on this checklist since the facility was closed. This was a drive-by inspection - the facility was closed. The gate was locked and a "For Sale" sign was up. The only telephone number on file (941-722-2319) has been disconnected. Last VE test for this relocatable soil cement plant was done in May 2006. It appears that this facility is no longer in business.
