COMMENTS: Pt witnessed the VE test of the cement silo by Arlington Environmental. No emissions were seen during the filling of the truck. The remainder of the facility was inspected. Stock piles were partially enclosed and dust on the the yard was did not blow off property. The sand that is loaded into the aggregat bin travel via conveyer belts and is kept moist. There is no dust collector connected to either system. This facility manufactures concrete stones joined by cable for earth stabilization. This process is performed under a roofed structure with possible fugitive emissions. No emissions were seen during this inspection. No violations were observed.
