COMMENTS:

1. A routine compliance inspection was performed by Allen Rainey and Caroline Shine.
2. No cement batching, block manufacturing or silo loading activities occurred during the inspection. Minimal plant yard traffic activities were observed.
3. No excessive fugitive emissions were observed. A Method 9 observation was not conducted. No areas were observed where reasonable precautions had not been taken to prevent the release of unconfined particulates. Wind speeds were estimated at 10 - 20 mph. The concrete surfaces were dry--there was no accumulated dust .
4. No objectionable odors were detected on or off the plant property.
5. Spot-checked fuel records for sulfur content from 10/1/07 to 10/15/08. Fuel purchases did not exceed the sulfur content limit. SCI fuel reports in EXCEL format can be manipulated for monthly reporting of truck, plant, equipment, etc., fuel usage (similar for materials processed).
6. There are plans to install central dust collectors at all CEMEX plants that lack them.
7. Visible emissions test reports for all emissions units were reviewed for this inspection.
8. Material Safety Data Sheets and annual usage reports have been requested for any forming agents used in producing the cement blocks to determine compliance with hazardous air pollutant emissions (HAP) (received via e-mail 10/22/08) Data will be evaluated for HAP.
