**COMMENTS:** PT: This is the initial VE test of unit which was installed July 2012. Records show that this was the 11th cadaver processed since commencing operation. The Department waved the 15 day test notification requirement to assist the facility to get into compliance. Shortly after the inspector complete the inspection, the unit's opacity was approximatly 25 % for several minutes. Once the operator was made aware, he realized that he failed to turn on the "air". Once corrections were made, there were no more visible emissions. The inspector and consultant suggested that he contact Matthews to have the opacity signal an alarm when the opacity is higher then allowed. Also, the operator did not have MSDS or any other documentation for the plastic used under the cadaver. The operator agrees to get this information.
